U.S. Patent and Trademark Office PTOL-303 (Rev. 08-06) Continuation of 11. does NOT place the application in condition for allowance because: Applicants and not amend the claims and Applicants arguments are not persuasive. As Lam '897 and Lam '151 and Shith are drawn to friction material and all references combined teach that using carbon fibers and partially carbonized fibers for producing a friction material at the claimed compositions, it would have been obvious to one of ordinary skill in the art at the time the invention was made to employ the partially carbonized fibers in the structure of Lam '897. As Applicant argues that none of the references teach partially carbonized fibers in the secondary layer. Lam '897' teaches friction modifying particles can be used in the secondary layer and Smith teaches partially carbonized fibers would be considered a friction modifying particle and therefore it would have been obvious to substitute one known friction modifying particle for another known friction modifying particle and therefore it would have been obvious to substitute one known friction modifying particle for another known friction modifying particle and therefore it would have been obvious to substitute one known friction modifying particle and therefore it would have been obvious to substitute one known friction modifying particle on the first material than the particle and therefore it would have been obvious to substitute one known friction modifying particle and therefore it would have been obvious to substitute one known friction modifying particle and therefore it would have been obvious to substitute one known friction modifying particle and therefore it would have been obvious to substitute one known friction modifying particle and therefore it would have been obvious to substitute one known friction modifying particle and therefore it would have been obvious to substitute one known friction modifying particle and therefore it would have been obvious to substitute one known friction modifying particle and therefore it would have been obvious to subst
